

Welcome to Radiation Oncology at McMaster University

Radiation Oncology is a rewarding clinical specialty that includes both hands-on, multidisciplinary clinical care of cancer patients, as well as mastery over sophisticated radiation treatment technology. It combines patient-oriented clinical skills with knowledge of the fascinating, ever-changing field of cancer biology, anatomy-based three-dimensional imaging competence, and physics-based technical radiation treatment planning skills.

Our 5-year Residency Program is based at the Juravinski Cancer Centre in Hamilton, in a supportive, inclusive, and inspiring multidisciplinary environment that provides training in all aspects of Radiation Oncology, with the flexibility to meet individual resident needs and interests.

Visit our website to learn more about our Program and our Department:
