

# LEARNING WITHOUT BOUNDARIES

# ONLINE GRADUATE DIPLOMA IN CLINICAL EPIDEMIOLOGY

The 100% online Graduate Diploma in Clinical Epidemiology delivers the core knowledge and skills to lead your own health research.

The Graduate Diploma in Clinical Epidemiology (GDCE) is a part-time, completely online program offered by the Department of Health Research Methods, Evidence, and Impact (HEI) at McMaster University. A unique option in Canada, the GDCE offers maximum flexibility for working professionals, students or post-graduate trainees already enrolled in another program, from anywhere in the world.

Covering core topics in clinical epidemiology, the GDCE is course-based and provides graduates with foundational knowledge in the principles of evidence-based medicine, in addition to the necessary skill set to thrive in clinical, policy, management, and research settings.

The GDCE builds on the strengths of McMaster University's internationally recognized Health Research Methods (HRM) Graduate Program. Like the HRM Program, the GDCE offers unparalleled teaching by world-class faculty and essential learning resources for students to leverage during enrollment.

**APPLICATION DEADLINE IS APRIL 30, 2023**
